

A photograph of a waterfall cascading over rocks, with water splashing and creating white foam at the base. The image is positioned on the left side of the slide.

CH2MHILL

**VE of Regional Municipality
of Durham's Courtice Water
Pollution Control Plant**

Presented to
**Canadian Society of Value
Analysis, 2004 Conference**

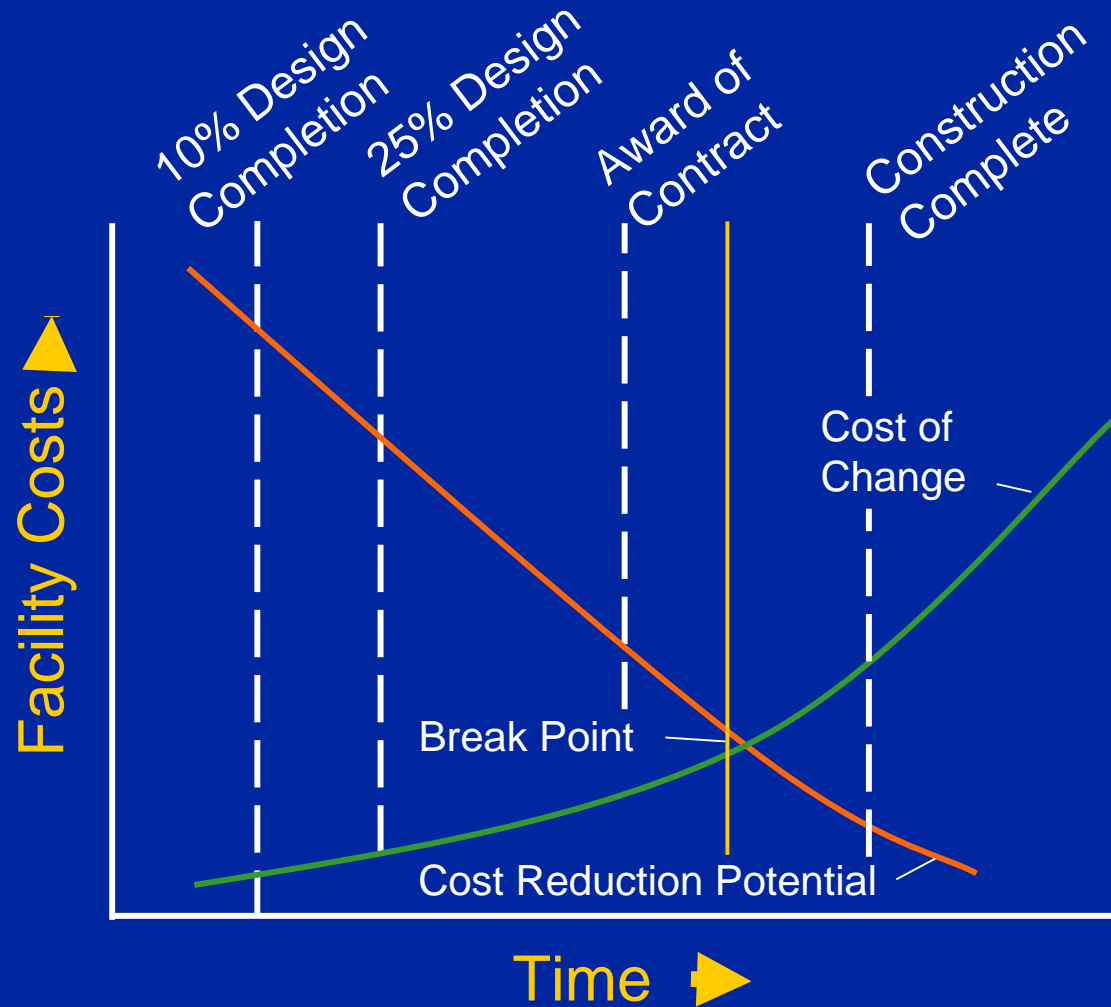

October 26, 2004

A photograph of a waterfall cascading over rocks, with water splashing and creating white foam. The image is positioned on the left side of the slide.

Why Use Value Engineering?

- Focus on essential functions, not systems or procedures
- Embraces creativity and out of the box thinking
- Uses life-cycle cost analysis for decision making
- Provides an organized framework for alternative development
- Consistently achieves the desired results (from 5:1 to 50:1 ROI)

Opportunities for Savings During Facility Life Cycle

A vertical photograph of a waterfall cascading over dark rocks, with water splashing and creating white foam at the bottom. The image is positioned on the left side of the slide.

Value Engineering Employs Six Steps

- Information
- Creative
- Analysis
- Development
- Presentation
- Implementation

A photograph of a waterfall cascading over rocks, with water splashing and creating white foam. The background is a dark, rocky cliffside.

Courtice WPCP Project History

- **1999 EA for Additional WPC Capacity for Greater Toronto Area along Lake Ontario; Whitby, Oshawa, Clarington (Courtice)**
- **136,380 m³/d (30 mgd) WPCP Needed at Courtice to Meet Projected 20-Year Growth**
- **65.5 ha site abutting Lake Ontario, west of Ontario Power Generation's Darlington Nuclear Generating Station**
- **Team Courtice: Engineering Firms of CH2M HILL, MacViro, Simcoe retained by Region for Design of WPCP**

A photograph of a waterfall cascading over rocks, with water splashing and creating white foam at the base. The image is positioned on the left side of the slide.

Courtice WPCP Description

- **Project 1 - Main Water Pollution Control Plant**
Team Courtice
- **Project 2 - New Sewage Pump Station at Harmony Creek WPCP**
EarthTech
- **Project 3 - Forcemain from Harmony Creek WPCP to New Courtice WPCP**
Totten Sims Hubicki Associates
- **Project 4 - New Outfall to Lake Ontario**
R.V. Anderson Associates
- **Project 5 - New Bridge over CNR Tracks to Provide Access to New Courtice WPCP**
Totten Sims Hubicki Associates

A photograph of a waterfall cascading over dark rocks, with water splashing and creating white foam at the base. The image is positioned on the left side of the slide.

VP & VE Studies for Courtice WPCP

- **Value Planning (VP) Study at Concept Design, 2 day Study, August 2002**
- **Value Engineering (VE) Study at 40% Design Development, 4 day Study, February 2004**
- **Project Estimate: \$135 million**

A photograph of a waterfall cascading over rocks, with water splashing and creating white foam. The image is positioned on the left side of the slide.

Value Planning Team: 18 Team Members, 2 Day Study

- **VE Team (4): Facilitator, Sr. Technologist for Wastewater Treatment Process, Mechanical Design Specialist, Air Quality/Biosolids Specialist**
- **Design Team (6): PM, Lead Design Engineer, Mechanical Process Engineer, Process Lead, Biosolids, Pump Station Design Lead**
- **Owner Team (8): Director of Eng, Director of Operations, Env Services, PM, Op's Staff, Planning Mgr, Tech Support Mgr, Program Mgr**

A photograph of a waterfall cascading over rocks, with water splashing and creating white foam at the base. The image is positioned on the left side of the slide.

Value Planning Study Approach

- **Plant Components**

- Pump Stations
- Site Access
- Utilities
- Headworks
- Biological Reactors
- Disinfection
- Anaerobic Digesters
- Biosolids Storage
- Septage Receiving
- Outfall
- Decommission
Harmony WPCP

- **Evaluated Options**

A vertical photograph of a waterfall cascading over rocks, positioned on the left side of the slide. The water is white and frothy as it falls.

Value Planning Study Results at Concept Design

- **24 VP Proposals Suggested**
- **Potential Savings: \$23 million**
- **10 Proposals Rejected**
- **14 Proposals Accepted, or Require Further Review**
- **Estimated Accepted Savings Range: \$8 million to \$17 million**

A photograph of a waterfall cascading over dark rocks, with water splashing and creating white foam. The image is positioned on the left side of the slide.

Value Engineering Team: 17 Team Members, 4 Day Study

- **VE Team (8):** Facilitator, Structural, Architect, Process, Civil/Mech, Elec/I&C, Cost, Op's
- **Owner Team (9):** Director of Operations, Mgr Env Svcs, Eng Env Svcs, Op's Staff, Tech Support Mgr, Program Mgr, Plant Ops Mgr, Bldg Svcs, Construction
- *Design Team Members (12) also at Orientation Meeting and VE Presentation*

A photograph of a waterfall cascading over rocks, with water splashing and creating white foam at the base. The image is positioned on the left side of the slide.

Value Engineering Study Approach (WPCP Only)

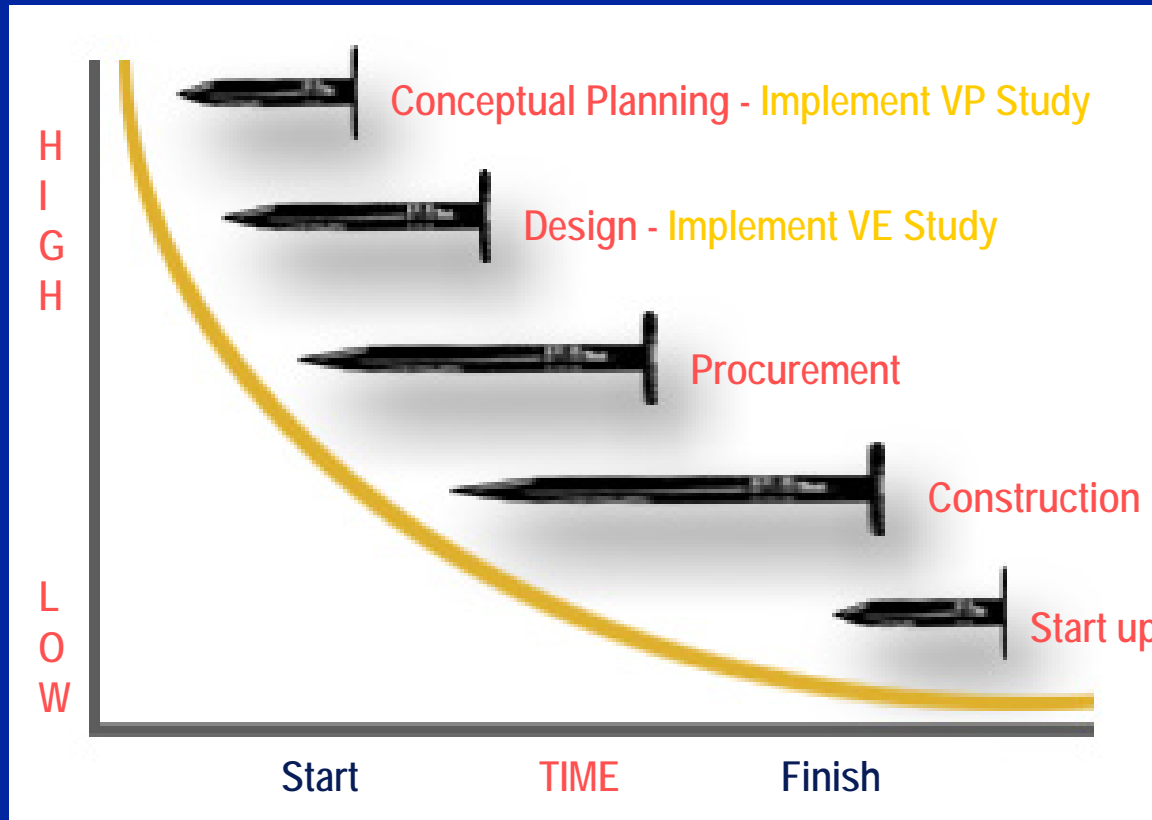

- **Plant Systems**
 - Architectural
 - Biosolids
 - Process Mechanical
 - Site Civil
 - Electrical

A photograph of a waterfall cascading over rocks, with water splashing and creating white foam. The image is positioned on the left side of the slide.

Value Engineering Study Results at 40% Design

- 26 Cost Saving Proposals Calc'd
- 18 Proposals Recommended for \$15.2 million Saving
- 18 Proposals Accepted, Modified, or Requiring Further Review for Saving of Approx. \$7.1 million
- 30 VE Observations

When and Why to Use Value Engineering

VP/VE is a proven methodology that enhances function and reduces cost

VP early in design gains Project Team's acceptance of appropriate alternative

VE at Mid-Design reduces cost without impacting function

A vertical photograph of a waterfall cascading over dark rocks, with water splashing and creating white foam. The image is positioned on the left side of the slide.

Value Engineering Balances Cost, Reliability, and Performance Issues

Value Engineering is a proven management technique that uses a systematic approach to identify the best functional balance between the cost, reliability and performance of a product or project to meet the owner's objectives
